on Drugs and Therapeutics

Volume 61 (Issue 1577)

July 29, 2019

Addendum: Estradiol/Progesterone (*Bijuva*) for Menopausal Vasomotor Symptoms

In our article on *Bijuva*, the oral fixed-dose combination of estradiol and progesterone (Med Lett Drugs Ther 2019; 61:99), Table 1 should have included single-ingredient oral formulations of estradiol and progesterone (see below). They will be added to the table as it appears online, along with medroxyprogesterone (*Provera*, and generics), another single-ingredient progestin available for use in women with an intact uterus who take systemic estrogen for menopausal symptoms. Taking generic estradiol and progesterone separately may be less convenient than taking *Bijuva*, but they cost less and allow for more dosing flexibility.

Bijuva and Its Components

Drug	Usual Dosage	Cost ¹
Estradiol/progesterone – <i>Bijuva</i> ² (TherapeuticsMD)	1/100 mg PO once/day	\$214.50
Estradiol – generic ³	1-2 mg PO once/day	7.30 ⁴
Progesterone (micronized) – generic ⁵	100 mg PO once/day ⁶	25.90
<i>Prometrium</i> (Virtus) ⁵		316.50

1. Approximate WAC for 30 days' treatment at the lowest usual dosage. WAC = wholesaler acquisition cost or manufacturer's published price to wholesalers; WAC represents a published catalogue or list price and may not represent an actual transactional price.
